

# QCX LLC d/b/a Polymarket US

## Pre-Test

- Pre-test requirement - Users must register via the FIA website

## Testing (October 24, 2026)

- Polymarket US will fail over its pre-production services exchange environment from its primary region (AWS us-east-1) to its disaster recovery region (AWS us-east-2), then fall back to primary after the exercise.
- Participants can validate end-to-end FIX flows against the DR site: logon, heartbeats, order entry, execution reports, fills, cancels and market data.
- End participant connectivity check of the new us-east-2 endpoint (TCP + FIX logon/logout, order entry). Window: ~2hrs

## Available Services (for DR testing)

- FIX Order Entry sessions
- FIX Market Data sessions

# POLYMARKET US (Cont'd)

## Credentials & Connectivity Details

- Use your existing pre-production FIX sessions and credentials. SenderCompID / TargetCompID do not change.
- Connectivity is via AWS PrivateLink. In your existing VPC, create a new interface endpoint to the Polymarket US us-east-2 FIX endpoint service; Polymarket US will accept the connection request.
- At failover, point your FIX engine to the DR hostname supplied by Polymarket US. After failback, revert to your normal hostname.

## Test Schedule (October 24, 2026)

**10am ET:** Failover to DR begins

**2pm ET:** DR site available; participant testing begins

**3pm ET:** Participant testing window closes

**5pm ET:** Failback to primary complete; normal operation restored

# POLYMARKET US (Cont'd)

## **After the Test**

- Orders and trades entered during the DR test have no production impact. Revert your FIX hostname after fallback.
- Orders and trades entered during the DR will persist during that time and be available after fallback to the primary zone.
